Hubtel Ghana

Dear Hiring Manager,

I am excited to apply for the Web Developer position at Hubtel Ghana. As a self-taught web developer, I have spent countless hours mastering the core technologies of web development, including HTML, CSS, JavaScript, and Restful APIs. I have also gained experience with popular frameworks like Bootstrap, Tailwind CSS, and React, as well as with SASS for styling.

I must admit that during my journey, I was caught up a bit in tutorial hell, which delayed me in building projects. However, I made a conscious effort to break out of that cycle and started building my own projects. While I may not have an extensive list of projects, I have been working on building my portfolio and have completed a React Calculator project and an HTML/CSS/JavaScript e-commerce project. These projects showcase my ability to build responsive, intuitive, and engaging web applications.

Furthermore, I believe that my experience as a digital sales representative at Raincoat Roofing Systems has provided me with valuable customer service skills, which I can bring to this role. I understand the importance of effective communication and collaboration with customers and team members alike. Additionally, my commitment to continuous learning and transparency aligns with Hubtel Ghana's values, and I am excited to join a team that prioritizes these qualities.

In terms of the requirements for the Web Developer position, I am comfortable with DOM manipulation, security, accessibility, and SEO practices. I have experience implementing Restful APIs and am confident in my ability to develop clean and efficient code.

Thank you for considering my application. I look forward to the opportunity to discuss how I can contribute to Hubtel Ghana's mission of providing excellent customer service and innovative web solutions.

Sincerely,

Kenneth Dela Nartey.
